SECURITY ACCESS

Control access to sensitive pages within Microsoft Dynamics 365 Business Central

Security Access is a DBE extension designed to secure access to sensitive pages within Microsoft Dynamics 365 Business Central, providing an additional layer of control alongside the standard profile, user group and permission framework.

It also enables the automatic deactivation of users without an active Microsoft 365 licence.

FEATURES

Sensitive Page Access Control

Restrict access to specific Business Central pages based on predefined rules.

Access Management

Define exactly who can access which pages, for each user or group.

Protection of Sensitive Pages

Protect sensitive Business Central pages from unauthorised access

Automatic Deactivation of Unlicensed Users

Users without an active Microsoft 365 licence are automatically deactivated in Business Central.

WHY USE IT?

- Strengthen user access control
- Secure access to business-critical data
- Enhance permission management in Business Central

BENEFITS

- Enhanced data security
- Simplified user access management
- Greater control over access to sensitive information

INTEGRATIONS

- Microsoft Dynamics 365 Business Central
- Microsoft 365
- Microsoft Graph API

Executive Management

- Enhanced control over sensitive access
- Reduced risk of unauthorised access

Project Managers

- Simplified permission management
- Centralised user management

Operational Teams

- Role-based access
- Secure navigation within Business Central

Strengthen Business Central security with advanced protection for sensitive pages and enhanced user access management.
